

Event Number: REM2024-009

This document is automatically generated by the Canada Energy Regulator (CER) based on information submitted by a regulated company. The CER acknowledges that the information in this Notification of Contamination (NOC) is the best available information at the time of submission and the reported information in the NOC is not updated after submission. Site progress and current status is captured in the annual updates submitted by a company each year for a contaminated site. If you have questions about the content of this document please contact [DLERSSupport@cer-rec.gc.ca](mailto:DLERSSupport@cer-rec.gc.ca).

Third-party contamination is on-site contamination that does not originate from the company’s facilities or company owned or leased lands or Right-of-Way. The CER requires that third party contamination is reported through the submission of a NOC.

## Event Types

### Remediation

- Notice of Contamination

## Company

### Name of the company that owns the facility or operates the pipeline where the event occurred

Trans Mountain Pipeline ULC

## Location

Pipeline

**Pipeline name**  
Mainline

**Commodity carried**  
Crude Oil, Crude Oil Sour Heavy, Crude Oil Sour Light, Crude Oil Sweet Heavy, Crude Oil Sweet Light

Facility

**Facility name**  
Not specified

Contaminated Site

**Province or territory**  
British Columbia

### Populated centre nearest to the contaminated site

Valemount

### Applicable land use at the contaminated site

Protected Area

Detailed Location

**Latitude at the contaminated site**  
52.91

**Longitude at the contaminated site**  
-118.79

## Initial Report

**Description of the contaminated site**

Historical hydrocarbon contamination encountered within the pipeline right of way during remediation of a minor hydraulic oil release.

**Has notification or reporting of the contamination to other local, provincial, territorial or federal regulators been completed?**

Yes

**State the Regulator(s) (separated by a comma)**

BC Parks

**Activity being performed at the time of the event**

Operation

**Final submission happened on**

2024-06-10 11:48 Mountain

**Scenario****All contaminants confirmed to be present at the contaminated site:**

- Petroleum Hydrocarbons (PHC)

**Initial estimate of volume of contaminated soil (m3)**

10

**Is this contaminated site within 30 m of surface water?**

Yes

**Actions****Summary description of the actions taken to date to mitigate the impacts of contamination**

Remedial excavation via excavator was carried out to remove soil impacted by the minor hydraulic oil release. The release was below reporting thresholds. During the remediation activities, historical contamination from an unknown source was identified. Sampling of the historical contamination was completed.

**Summary description of the actions that are planned to mitigate the impacts of contamination**

Further environmental site assessment activities will be carried out to delineate the identified historical contamination.

**Annual Updates**
